Equations

Tables

Packages

Conclusion

Definition

A computer system for typesetting (complicated) documents

Typewriter → designer → typesetter → printer

Text (content) → design and implement → what we see and read

- ▶ L^AT_EX is a document ‘design’ language (high level)

What is L^AT_EX?

[Outline](#)[Introduction](#)[Advantages of L^AT_EX](#)[Resources](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Definition

A computer system for typesetting (complicated) documents

Typewriter → designer → typesetter → printer

Text (content) → design and implement → what we see and read

- ▶ L^AT_EX is a document ‘design’ language (high level)
- ▶ L^AT_EX is built on T_EX — a typesetting language (low level)
- ▶ Similar idea to HTML (more powerful than HTML)

What is L^AT_EX?

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

How do we use it?

- ▶ To use L^AT_EX one creates a “text” file which contains text + design (and some typesetting) instructions

What is L^AT_EX?

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

How do we use it?

- ▶ To use L^AT_EX one creates a “text” file which contains text + design (and some typesetting) instructions
- ▶ One then *compiles* this file to obtain the formatted version which can be sent to a printer

Properties of L^AT_EX

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

- ▶ L^AT_EX/T_EX is available for just about any computer system

Properties of L^AT_EX

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

- ▶ L^AT_EX/T_EX is available for just about any computer system
- ▶ It is *the method* of document preparation for scientists especially those wanting to display mathematics
- ▶ It is a standard for giving to journals
- ▶ Electronic preprint archives on the Net usually recommend L^AT_EX/T_EX

Properties of L^AT_EX

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

- ▶ L^AT_EX/T_EX is available for just about any computer system
- ▶ It is *the method* of document preparation for scientists especially those wanting to display mathematics
- ▶ It is a standard for giving to journals
- ▶ Electronic preprint archives on the Net usually recommend L^AT_EX/T_EX
- ▶ L^AT_EX frees you from worrying too much about formatting as it is a high level formatting language based on *logical design*
- ▶ All you need worry about is content (mostly).

Properties of L^AT_EX

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

- ▶ L^AT_EX/T_EX is available for just about any computer system
- ▶ It is *the method* of document preparation for scientists especially those wanting to display mathematics
- ▶ It is a standard for giving to journals
- ▶ Electronic preprint archives on the Net usually recommend L^AT_EX/T_EX
- ▶ L^AT_EX frees you from worrying too much about formatting as it is a high level formatting language based on *logical design*
- ▶ All you need worry about is content (mostly).
- ▶ L^AT_EX vs T_EX = broad design vs nuts-and-bolts (high vs low)
- ▶ WYSIWYG apps rely on *visual design* vs L^AT_EX's *logical design*

Some examples of logical design

[Outline](#)[Introduction](#)[Advantages of L^AT_EX](#)[Resources](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Example 1:

Say you want to add some poetry to your document. In L^AT_EX there is a `verse` environment that lets you tell L^AT_EX that the text inside some part of your document is poetry and L^AT_EX will then indent it (etc) so it stands out correctly.

⇒ automatic formatting

Some examples of logical design

[Outline](#)[Introduction](#)[Advantages of L^AT_EX](#)[Resources](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Example 1:

Say you want to add some poetry to your document. In L^AT_EX there is a `verse` environment that lets you tell L^AT_EX that the text inside some part of your document is poetry and L^AT_EX will then indent it (etc) so it stands out correctly.

⇒ automatic formatting

Example 2:

Say you want to use an inner product in your document, as in (A, B) you can write a macro (i.e. a definition)

`\ip`

that gives you (A, B) whenever you type it. This allows you to change (A, B) to (ϕ, Γ) or even $[\phi, \Gamma]$ whenever you want throughout your document.

⇒ Easy to make global changes

Some examples of logical design

[Outline](#)[Introduction](#)[Advantages of L^AT_EX](#)[Resources](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Example 3: Proper typesetting

Ligatures — the letters *f* and *l* put together give *fl*
not like *g* and *c* which become *gc*
⇒ fancy typesetting built-in

Some examples of logical design

Example 3: Proper typesetting

Ligatures — the letters *f* and *l* put together give *fl*
not like *g* and *c* which become *gc*
⇒ fancy typesetting built-in

Example 4: More proper typesetting

Dashes — there are 3 different dashes:

- 1 dash as in *inter-word* gives *inter-word*,
- 2 for number range *10--90* giving *10–90*,
- and 3 for sentence punctuation as in

Dashes --- there are 3 different dashes
gives the beginning of this sentence.

Some more examples of logical design

[Outline](#)[Introduction](#)[Advantages of L^AT_EX](#)[Resources](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Example 5: lists

```
\begin{enumerate}
  \item a list of lists
  \item \begin{itemize}
    \item list 1
    \item list 2
    \item list 3

    \end{itemize}
  \item another item
\end{enumerate}
```

Some more examples of logical design

Example 5: lists

```
\begin{enumerate}  
  \item a list of lists  
  \item \begin{itemize}  
    \item list 1  
    \item list 2  
    \item list 3  
  
  \end{itemize}  
  \item another item  
\end{enumerate}
```

1. a list of lists
2.
 - ▶ list 1
 - ▶ list 2
 - ▶ list 3
3. another item

More advantages

- ▶ Mathematical typesetting ($\mathcal{A}\mathcal{M}\mathcal{S}$ -L^AT_EX packages)
- ▶ A single font designed by Knuth

- ▶ Bibliographic database with BIB_TE_X and automatic cross-referencing
- ▶ Flexible
- ▶ Small text file to transport (not binary) = long lifetime and device independent
- ▶ It's free!
- ▶ Lots of add-ons: (Comprehensive TeX Archive = CTAN)
- ▶ Department standard = lots of expertise

Right tool for the job

The right tool for theses

In the end you should use the *right tool for the job*. Thesis and journal articles in mathematics are highly structured documents with lots of sections and subsections, cross references, mathematics and citations.

All this means that using L^AT_EX is the way-to-go!

History

Outline

Introduction

Advantages of L^AT_EX

Resources

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

- ▶ Donald Knuth announced the first version of T_EX in 1978
- ▶ The standard version of T_EX came out in 1983
- ▶ Leslie Lamport started distributing L^AT_EX2.09 in 1985

History

[Outline](#)[Introduction](#)[Advantages of L^AT_EX](#)[Resources](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

- ▶ Donald Knuth announced the first version of T_EX in 1978
- ▶ The standard version of T_EX came out in 1983
- ▶ Leslie Lamport started distributing L^AT_EX2.09 in 1985
- ▶ CTAN started in 1986
- ▶ The current L^AT_EX 2_ε was distributed in 1994 (backward compatible with L^AT_EX2.09 mostly)

History

```

```
Euler@digican> latex myfirst.tex
```

Don't worry the compilation is *fast*...

The command `latex` generates `myfirst.aux`, `myfirst.log` and most importantly the `myfirst.dvi`, the 'device independent' file. Compile frequently. Remove `.aux` file if stuck.

On digican II

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

One can preview the output on the screen using

```
Euler@digican> xdvi myfirst.dvi
```

On digican II

Basic structure of a L^AT_EX document

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

```
\documentclass{the type of document}
```

After this is the the rest of the *preamble*, which is setting up the document, eg macros such as `\ip`, double-spacing, adding extension packages etc.

```
\begin{document}
```

A structured document

```
\end{document}
```

Document classes

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Some document classes are

- ▶ `article`
- ▶ `report`
- ▶ `book`
- ▶ `letter`
- ▶ `slides`
- ▶ `seminar`
- ▶ `prosper`
- ▶ `beamer`

Theses in the department can be written under `report` or `book` but other classes have written like various specific thesis and alternative `letter` classes.

A more sophisticated talk environment (*this one!*) uses **beamer**

Three types of L^AT_EX structure I

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The pair

```
\begin{some formatting environment}  
\end{some formatting environment}
```

Three types of L^AT_EX structure I

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The pair

```
\begin{some formatting environment}  
\end{some formatting environment}
```

Example:

```
\begin{equation}  
x^n + y^n = z^n  
\end{equation}
```

gives

$$x^n + y^n = z^n \tag{1}$$

Three types of L^AT_EX structure II

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The formatting command

```
\do-this{to this input}
```

Three types of L^AT_EX structure II

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The formatting command

```
\do-this{to this input}
```

Example:

```
\textbf{I am bold}
```

 makes the text contained with boldface
such as

I am bold

Three types of L^AT_EX structure III

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The command

`\just-do-this-now`

Three types of L^AT_EX structure III

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The command

`\just-do-this-now`

Examples

`\pounds` gives us the pound symbol £

Three types of L^AT_EX structure III

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

The command

`\just-do-this-now`

Examples

`\pounds` gives us the pound symbol £

`{1st-text \large 2nd-text}` makes the 2nd-text larger, as in
1st-text 2nd-text

Special characters

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Hence there are some *special* characters in L^AT_EX

These are `\` `^` `~` `{` `}` `_` `&` `%` `$` `#`

Special characters

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Basic structure](#)[L^AT_EX commands](#)[Preamble](#)[Main contents](#)[References](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Hence there are some *special* characters in L^AT_EX

These are `\` `^` `~` `{` `}` `_` `&` `%` `$` `#`

Sometimes formatting commands take multiple arguments inside more than one set of `{}` or parameters inside `[]`

Special characters

```
\section{Introduction}
```

Here we explain why everyone that has gone before is so insignificant compared to the intellectual leap this article is about to unveil. We need to have a second sentence.

```
\section{The methods} \label{methods}
```

Similarly, staircase polygons with staircase holes were also investigated. Topologically, the objects look like the cross section of a slab of Emmenthaler cheese or foam rubber. There is a boundary polygon, containing disjoint polygons which don't touch the boundary. It was shown that, with a finite number of holes, the connective constant is unchanged for any finite number of holes.

```
\section{Results}
```

We are just so clever for thinking like this

in section `\ref{methods}`. In an earlier paper

`\cite{guttman1998}` the problem of `\emph{punctured polygons}` was studied.

```
\section*{Acknowledgements}
```

I would like to thank my family and the members of the Academy of Motion Pictures.

This tells L^AT_EX that you keep a bibliographic database called `my-bibliographic-database.bib`.

L^AT_EX searches for all citations you made: eg `\cite{guttman1998}` by looking up the 'keys' eg `guttman1998` in your `.bib` file

L^AT_EX creates a file called `myfirst.bbl` with the actual bibliography for `myfirst.tex` (and a log file `myfirst.blg`)

my-bibliographic-database.bib

pages="8123--8135"  
}
```

Inclusion of Encapsulated postscript figures

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

Use `graphics` or `graphicx` packages by putting

```
\usepackage{graphicx}
```

in the preamble

then add in the main text

```
\begin{figure}[ht]
\begin{center}
\includegraphics[width=12cm]{picture.eps}
\caption{\textit{A caption explaining the figure.}}
\label{myfig1}
\end{center}
\end{figure}
```

close to where you first cite the figure with

```
We show this in figure~\ref{myfig1}
```

How do I make the postscript figures

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

[Macromedia Freehand](#) for Macintosh or [xfig](#) for Unix/X11 are good also for producing single “vector” drawings, as many mathematical subjects call for, and can output to encapsulated postscript (for inclusion in L^AT_EX documents). L^AT_EX has some basic “vector” drawing capabilities builtin.

Other applications such as [gnuplot](#), [Mathematica](#), [Maple](#) etc can produce postscript output.

Can include other types of figure, eg [jpeg](#), [pdf](#)

Equations

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

There are two major types of equation:

1. 'Displayed' equations
2. 'In-line' equations

Equations

[Outline](#)[Introduction](#)[Using L^AT_EX](#)[Document Structure](#)[Figures](#)[Equations](#)[Tables](#)[Packages](#)[Conclusion](#)

There are two major types of equation:

1. 'Displayed' equations
2. 'In-line' equations

There are several environments for producing displayed equations some with numbering, some without, some for multiline equations and some for single lines.

Equations: Displayed

Outline

Introduction

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

For single line equations with numbering you can use

```
\begin{equation}
\sum_{k=0}^{\infty}
\left( \frac{\Gamma(z_k)}{\Phi(z_k)} + 1 \right)
= \oint d\theta \, e^{2\pi i \theta}
\end{equation}
```

$$\sum_{k=0}^{\infty} \left(\frac{\Gamma(z_k)}{\Phi(z_k)} + 1 \right) = \oint d\theta \, e^{2\pi i \theta} \quad (2)$$

Arrays of equations

Outline

Introduction

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

Without using the $\mathcal{A}\mathcal{M}\mathcal{S}$ -L^AT_EX package one can use `eqnarray`

```
\begin{eqnarray}
Z &= & \int_0^{\infty} \phi(x) \, dx \\
&= & \frac{\partial F(y,0)}{\partial y}
\end{eqnarray}
```

giving

$$\begin{aligned} Z &= \int_0^{\infty} \phi(x) \, dx \\ &= \frac{\partial F(y,0)}{\partial y} \end{aligned} \tag{3}$$

In $\mathcal{A}\mathcal{M}\mathcal{S}$ -L^AT_EX package there is the `align` and the `cases` environments (as well as many others).

Equations: Inline

Outline

Introduction

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

Consider the same equation displayed in-line ‘encased’ by \$ and \$

We have $\sum_{k=0}^{\infty} \left(\frac{\Gamma(z_k)}{\Phi(z_k)} + 1 \right) = \oint d\theta \, e^{2\pi i \theta}$.
 Usually only smaller equations like $\Gamma(z_i) = 1/2$ would be displayed inline.

We have $\sum_{k=0}^{\infty} (\Gamma(z_k)/\Phi(z_k) + 1) = \oint d\theta \, e^{2\pi i \theta}$. Usually only smaller equations like $\Gamma(z_i) = 1/2$ would be displayed inline.

Tables: tabular environment

Outline

Introduction

Using L^AT_EX

Document Structure

Figures

Equations

Tables

Packages

Conclusion

```
\begin{tabular}{|r|l|c|}\hline
First Name & Surname & Favourite Equation\\
\hline
John & Tuttle &  $\nabla^2 \phi = 0$ \\
Benjamin & Owczarek &  $1+1=2$  \\
Tony & Blair &  $e^{2\pi i} = 1$  \\
\hline\hline
\end{tabular}
```

gives

First Name	Surname	Favourite Equation
John	Tuttle	$\nabla^2 \phi = 0$
Benjamin	Owczarek	$1 + 1 = 2$
Tony	Blair	$e^{2\pi i} = 1$

Tables: a referenced table

One can put the tabular environment inside a table or figure

```
\begin{table}
\centering
\begin{tabular}{|r|l|c|}\hline
First Name & Surname & Favourite Equation \\ \hline
John & Tuttle &  $\nabla^2 \phi = 0$  \\
Benjamin & Owczarek &  $1+1=2$  \\
Tony & Blair &  $e^{2\pi i} = 1$  \\ \hline \hline
\end{tabular}
\caption{A table of people}
\label{tab:names}
\end{table}
```

First Name	Surname	Favourite Equation
John	Tuttle	$\nabla^2 \phi = 0$
Benjamin	Owczarek	$1 + 1 = 2$
Tony	Blair	$e^{2\pi i} = 1$

Table: A table of people

Useful packages

- ▶ The $\mathcal{A}\mathcal{M}\mathcal{S}$ -L^AT_EX packages `amsmath`, `amsthm` etc are all useful for the best presentation of maths
